December 5, 2005, San Rafael, California—PAX Scientific announced that Tom Austin would be joining the company as Senior Mechanical Engineer. Tom, who has more than twenty years experience in a broad range of engineering areas, including product design, thermal and stress analysis, and project management, will initially focus on the testing and manufacturing for PAX's mixer project.

"Tom brings a wealth of skills to PAX," stated Director of Engineering Carol Marsh. She continued, "He has shepherded projects from quote and conception to production and certification in a variety of fields, all of his experience will enrich the PAX team."

Previously, he worked for Helix Polycold Systems as a mechanical design engineer. He also worked at PrimeSource, Phonic Ear, Cisco, DSC Communications, and Hughes-Avicom International. Tom has a degree in engineering from Stanford University with an emphasis in mechanical and aeronautical engineering.

PAX Scientific is an industrial design firm that employs a fundamental scientific discovery, called the PAX Streamlining Principle, to translate natural flow efficiencies into streamlined geometries. The company then uses these geometries to create designs that significantly improve the performance, output, and energy usage of a wide range of industrial and domestic equipment. PAX licenses its patented designs to manufacturers.
