December 1, 2004, San Rafael, California—PAX Scientific announced that Carol Marsh has joined the company as its new Director of Engineering. She brings to the team an extensive background as a technical project manager and engineer for both Agilent Technologies and Hewlett-Packard.

At Agilent, Carol led cross-functional and remote teams, transferring two manufacturing product lines from out-of-state factories to the company's Rohnert Park facility. She also served as Project Manager leading new product development in R&D for the Lightwave Division. Earlier, at Hewlett-Packard, she held positions in mechanical engineering, marketing support, product design, and manufacturing development. Carol has a BS in mechanical engineering from UC Berkeley and a BS in psychology from UCLA.

"We're very excited that Carol is joining PAX," stated CEO Jayden Harman. He continued, "She brings to the team a wealth of expertise in the demanding arena of product development, and her knowledge will support our ability to streamline the development process."

PAX Scientific is an industrial design firm that employs a fundamental scientific discovery, called the PAX Streamlining Principle, to translate natural flow efficiencies into streamlined geometries. The company then uses these geometries to create designs that significantly improve the performance, output, and energy usage of a wide range of industrial and domestic equipment. PAX licenses its patented designs to manufacturers.
